QUALITY MARINA EQUIPMENT

## Environmental statement for Formosa Plastic Group

To promote environmental protection and ensure that pollution control measures are properly implemented, the Nan Ya Environmental Engineering Center was created to take charge of planning, promotion, and implementation of tasks relating to environmental protection. In addition, enormous investments were made in pollution control equipment.

Our broad focus of environmental concerns includes air quality, water quality, noise, solid waste, and safety. The most effective way to achieve our environmental goals is to reduce the creation of pollution at the source. As part of the No. 6 Naphtha Cracker Project, in addition to selecting the best manufacturing processes and equipment, US\$3.21 billion is earmarked for environmental protection equipment, accounting for about 20% of the total investment of US\$15.6 billion.

Over the years we have pursued improvement in pollution controls with good results. To accomplish the task of protecting the environment, we insist on using the most advanced processing technology, in conjunction with flawless control systems.

It is the policy of this Group that equal emphasis is placed upon industrial development and environmental protection. We make it one of our top priorities that we not only conform to the national environmental standards, but also meet international standards.
